

Suvil My-Piccolino USB

“The Art of industrial design applied to Technology”

My-Piccolino USB from Suvil Technologies Corp. is a tiny sleek optical mouse. Its exquisite ergonomic form was designed in Spain by the young promising industrial designer, Oscar Pascual.

In this mouse, the index finger controls the up key and corresponds to the left button on a conventional mouse. The thumb controls the side key and is equivalent to the right button on a mouse. The middle finger is bent slightly and is supported on a padded, non-slip curved surface carefully tailored to the shape of the finger.

My-Piccolino USB is a USB mouse of patented design intended to be used on laptops.

When working with a mouse as small as **My-Piccolino USB** it gives you a distinct feeling of comfort, as the position of the fingers is similar to writing with a pen. The sleek sensual slimness and modernity of **My-Piccolino USB** suits the dynamic user, who is always on the go, loves originality and is, above all, highly chic.

My-Piccolino USB has a resolution of 800 CPI. It has a unique and revolutionary design, and is very striking yet affordable, making it the ideal gift.

Suvil **My-Piccolino USB** costs only **€14.95** (incl VAT).

Suvil My-Piccolino USB

"The **A**rt of industrial design applied to **T**echnology"
